

Sand Point Spit Beach PSP Results

The February 13, 2014 Sand Point PSP Sample, tested February 28, 2014, has reduced PSP Toxin levels of **33.6 micrograms** and is **below** the FDA limit of 80 micrograms. These are Consumable PSP Levels.

The Qagan Tayagungin Tribe neither encourages nor discourages the consumption of the local shellfish, but provides this information for the community members to make an educated decision regarding shellfish consumption.

If you have any questions, give Karis Porcincula or Karmen Newman a call at: (907)383-6968

The Recreational Shellfish Pilot Program is funded through the State of Alaska. The State of Alaska funds at least five communities from Alaska, in which they help monitor occurrences and distribution of PSP toxins that will increase communities' capacities in devising a mechanism to better respond to the threat and minimize the risk of poisoning. The samples are analyzed by the Alaska Department of Environmental Conservation using approved analytical methods. The State of Alaska is producing funding for the Sand Point Spit Beach PSP testing until the summer of 2015.
