

Sand Point Spit Beach PSP Results

The February 1, 2018 Sand Point clam sample has elevated PSP Toxin levels of **126 micrograms** and is ABOVE the FDA limit of 80 micrograms. **These are UNSAFE PSP levels!**

The Qagan Tayagungin Tribe neither encourages nor discourages the consumption of the local shellfish, but provides this information for the community members to make an educated decision regarding shellfish consumption.

The Response to Paralytic Shellfish Poisoning in Aleut Communities project is funded by the Region 10 U.S. Environmental Protection Agency (EPA) and managed by the Qagan Tayagungin Tribe with the Indian General Assistance Program (IGAP). The samples are all analyzed by the Alaska Department of Environmental Conservation, Environmental Health Laboratory using approved analytical methods. The data collection will continue through September 2019. Note that the FDA limit for PSP is 80 micrograms/100 grams, the red line on the graph. More information is available on our website at <http://www.qtribe.org>, under Environmental, PSP Program.
