

Sand Point Spit Beach PSP Results

The Sand Point Sample, from June 25, 2013, has elevated PSP Toxin levels of **88 micrograms** and is above the FDA limit of **80 micrograms**.

These are Dangerous PSP levels.

The Recreational Shellfish Pilot Program is funded through the State of Alaska. The State of Alaska funds at least five communities from Alaska, in which they help monitor occurrence and distribution of PSP toxins that will increase communities' capacities in devising a mechanism to better respond to the threat and minimize the risks of poisoning. The samples are analyzed by the Alaska Department of Environmental Conservation using approved analytical methods. The State of Alaska is producing funding for the Sand Point Spit Beach PSP testing until the summer of 2015.
