

Sand Point Spit Beach PSP Results

The Sand Point Spit Beach sample, collected March 19, 2014, has PSP levels of **40 micrograms**, which is **below** the FDA limit of 80 micrograms. **These are consumable PSP levels!**

The Qagan Tayagungin Tribe neither encourages nor discourages the consumption of the local shellfish, but provides this information for the community members to make an educated decision regarding shellfish consumption.

The Recreational Shellfish Pilot Program is funded through the State of Alaska. The State of Alaska funds at least five communities from Alaska, in which they help monitor occurrence and distribution of PSP toxins that will increase communities' capacities in devising a mechanism to better respond to the threat and minimize the risks of poisoning. The samples are analyzed by the Alaska Department of Environmental Conservation using approved analytical methods. The State of Alaska is producing funding for the Sand Point Spit Beach PSP testing until the summer of 2015. For more information, check the QTT Website at: <http://www.qtttribe.org>, under Environmental, PSP Projects

If you have any questions about PSP, call Karmen Newman or Karis Porcincula at: (907) 383-6968
