

Sand Point Spit Beach PSP Results

The May 25, 2017 clam sample has elevated PSP levels of **90.9 micrograms** and is **ABOVE** the FDA limit of 80 micrograms! These are unsafe PSP levels!

The Qagan Tayagungin Tribe neither encourages nor discourages the consumption of the local shellfish, but provides this information for the community members to make an educated decision regarding shellfish consumption.

If you have any questions, please call **Karis Porcincula** or **Jasmine Maligaya** at: (907)383-6968

The Response to Paralytic Shellfish Poisoning in Aleut Communities project is funded by the Region 10 U.S. Environmental Protection Agency (EPA) and managed by the Qagan Tayagungin Tribe with the Indian General Assistance Program (IGAP). The samples are all analyzed by the Alaska Department of Environmental Conservation, Environmental Health Laboratory using approved analytical methods. The attached table includes data from a previously funded Recreational Shellfish Pilot Program through the State of Alaska and IGAP funding through the Aleutian/ Pribilof Islands Association. The data collection will continue through September 2017. Note that the FDA limit for PSP is 80 micrograms/100 grams, the red line on the graphs. More information is available on our website at <http://www.qttribe.org> under Environmental, PSP Program
